CLEF, September 21-24, 2026, Jena, Germany

# Motivation

- Simplify Scientific Text

- Everyone agrees on the importance of objective scientific information
- But scientific documents are inherently complex...
- Can we improve science literacy for everyone?
- Generative models for text simplification can help!

- And Nothing More!

- LLMs prone to overgeneration (informally called "*hallucination*")
- Have created a huge collection of spurious/over-generation content!
- In 2025: 29% of submissions > 25% spurious sentences, 21% > 50%...

# Overview

- SimpleText Track setup similar 2021-2024
  - Major changes in setup and corpora in 2025
  - Boost in participation and results
  - Will continue into 2026
- CLEF 2026 SimpleText Track
  - *Simplify Scientific Text (and Nothing More)*
- The following *three* tasks:
  - 1 **Text Simplification:** *simplify scientific text*
  - 2 **Controlled Creativity:** *identify and avoid hallucination*
  - 3 **SimpleText 2024-2025 Revisited:** *selected tasks by popular request*

# Task 1: Text Simplification

## ● *Task 1: Simplify Scientific Text*

- New corpus (EMNLP/TSAR 2024)!
  - Cochrane-auto is true document-level text simplification
  - More variation (sentence merge, order swaps) and discourse structure
  - Paragraph-level and sentence-level data realigned and restricted
- Biomedical text – free to use, similar to existing TS corpora
  - Sentence-level (T1.1) and Document-level (T1.2) text simplification
  - Large-scale aligned train and test data (9,160 sentences, 666 abstracts)

## ● *Bonus: Cochrane Abstracts/Plain Language Summaries in English*

- + *Spanish (es), French (fr), Farsi (fa), Chinese (zh), Japanese (ja), Portuguese (pt), Korean (ko), Thai (th), German (de), Russian (ru), Malay (ms), and Croatian (hr).*
- + *Abstracts and freely usable full-text systematic reviews*

# Task 2: Controlled Creativity

- *Task 2: Identify and Avoid Hallucination*
  - *Task 2.1: to identify creative generation at document level*
    - to detect what sentences are fully grounded on source input (a) without and (b) with access to the source sentences
    - → also labels those introducing **significant new content**
  - *Task 2.2: to detect and classify information distortion errors in simplified sentences*
    - 14 information distortion categories (Fluency, Alignment, Information, Simplification)
    - Can LLMs do detailed "human evaluation"?
  - *Task 2.3: to avoid creative generation and perform grounded generation by design*
    - Submit pairs of simplified abstracts with/without "hallucinations"

# Task 3: SimpleText 2024-2025 Revisited

- *Task 3: Selected Tasks by Popular Request*
- Move to Codabench makes it easy to keep tasks running in 2026
  - Codabenches are still active in post-competition mode!
- Consider adding pilot tasks for possible extensions in 2026

The screenshot shows the CLEF 2025 SimpleText Task 1 page on the Codabench platform. The page has a dark header with navigation links: Search Competitions, Benchmarks, Resources, Queue Management, Login, and Sign-up. The main content area features a large title "CLEF 2025 SIMPLETEXT TASK 1" and a circular logo with a document icon and the text "ON IT SIMPLE". To the right of the title, there are two buttons: "90 PARTICIPANTS" (red) and "281 SUBMISSIONS" (green). Below the title, the text reads: "ORGANIZED BY: Liana87", "CURRENT PHASE ENDS: Never", "CURRENT SERVER TIME: September 4, 2025 At 10:58 AM GMT+2", and "Docker image: bvendeville/simpletextpy37easse". A timeline at the bottom shows the competition period from May 2025 to December 2025, with a red dot indicating the current phase. The page also includes a navigation bar with links: Get Started, Phases, My Submissions, Results, and Forum. The "Overview" section is currently selected, showing the "CLEF 2025 SimpleText Track" and a link to the task page: <https://www.codabench.org/competitions/8327/>. The "Task 1: Text Simplification: Simplify scientific text -Overview" section describes the CLEF 2025 SimpleText track, mentioning the Cochrane-auto corpus and its expansion into the biomedical domain, building on methodologies used for datasets like Wiki-auto and Newsela-auto.

# CLEF 2026 SimpleText Track

Simplify Scientific Text (and Nothing More):

- *Task 1: Text Simplification: simplify scientific text*
  - + New aligned biomedical data (Cochrane-auto)
  - + both sentence, paragraph and document level simplification
  - + analysis of information distortion (“hallucination?”)
- *Task 2: Controlled Creativity: identify and avoid hallucination*
  - + Real “hallucination” data from CLEF generative text tasks
  - + What output is (not) grounded on source(s)? (w/wo source access)
  - + Fine-grained information distortion categorization
- *Task 3: SimpleText 2024-2025 Revisited: selected tasks by popular request*
  - We take submissions for earlier tasks

## SimpleText

Over the last few years, the SimpleText Track has created an active community of researchers in NLP and IR working together to improve access to scientific text. Its benchmarks on scientific passage retrieval, scientific terminology detection and explanation, and scientific text simplification have become standard references. After using a similar track setup in 2021-2024, we significantly changed the track's setup and tasks in 2025. We will continue this successful setup in 2026. Hence, the CLEF 2026 SimpleText track will contain the following 2+1 tasks. Task 1 (Text Simplification): Simplify scientific text. Task 2 (Controlled Creativity): Identify and avoid hallucination. Task 3 (SimpleText Revisited): selected tasks by popular request.

### Organizers

- Liana Ermakova (HCTI, Université de Bretagne Occidentale)
- Benjamin Vendeville (Université Bretagne Occidentale)
- Jan Bakker (University of Amsterdam)
